

FIG. 1 is a perspective view of a rectangular frame assembly 10, including a front panel 20 and a rear panel 30, which are connected by a plurality of vertical and horizontal support members 40. The front panel 20 is shown in a perspective view, and the rear panel 30 is shown in a perspective view. The support members 40 are shown in a perspective view. The front panel 20 is shown in a perspective view, and the rear panel 30 is shown in a perspective view. The support members 40 are shown in a perspective view.

FIG. 8

FIG. 9 is a perspective view of a first embodiment of a device. The device includes a substrate 30, a first layer 34, and a second layer 36. The first layer 34 is disposed on the substrate 30, and the second layer 36 is disposed on the first layer 34. The first layer 34 and the second layer 36 are disposed on the substrate 30 in a staggered manner. The first layer 34 and the second layer 36 are disposed on the substrate 30 in a staggered manner. The first layer 34 and the second layer 36 are disposed on the substrate 30 in a staggered manner.

FIG. 19 is a perspective view of a container 12 in accordance with the present invention. The container 12 is shown in a partially open position, with the lid 14 being hinged to the main body 12. The lid 14 is shown with a series of ridges 15, which are formed by a series of overlapping layers 16. The ridges 15 are formed by a series of overlapping layers 16, which are formed by a series of overlapping layers 16. The ridges 15 are formed by a series of overlapping layers 16, which are formed by a series of overlapping layers 16.
